CRL Form008 Rev 1.2 CRL Analytical Request Form Mar 2015.docx

Please fill out the analytical request form, and I will put this project on the schedule. The analytes that you listed below can go in the bottom of page 4 under the analyte class/subset request. Once the QAPP becomes available, please send an electronic copy.

Thanks!

Amanda

Yes, if it is possible it would be helpful.

Hi Bob,

I talked with a VOC analyst and EDB and 1,2 DCA can both be analyzed by 8260. Concerning trimethylbenzenes, we analyze for 1,2,4 and 1,3,5-trimethylbenzene. Do you want these analytes in addition to BTEX and naphthalene?

Thanks,

Amanda

Hi Amanda,

I spoke to the tribe about sampling. They are fine with the 8 RCRA total metals, no Hg.

For VOCs, as we discussed, benzene, toluene, ethylbenzene, and xylenes, plus naphthalene are top priority. If you also can quantify trimethylbenzenes and 1,2 DCA it would be appreciated. The tribe asked about ethylene dibromide but I think that is a different analysis. 1,2 DCA and EDB are lead scavengers and have shown up in previous groundwater samples. I thought that EDB had a different method for analysis than 8260. Please let me know if this is also quantifiable.

Many thanks for all your assistance. I went to see Rob this morning and he was very helpful. I

was able to get what I need to get the samples collected.

Thank you!
